

PATH TO CSP®

After your foundational CSM® certification, expand your knowledge of Scrum roles and responsibilities to apply that learning in professional practice. The A-CSM™ certification allows you to gain deeper insight into serving your organization through learning.

Now that you have developed understanding of the CSM® role, complete your journey with advanced training at the CSP-SM™ certification level. By emphasizing enhanced team dynamics and development, you'll affect change and meaningful transformation, in general or at scale.

The CSPO® path begins with a focus on the overall vision of the CSPO® role. Learning objectives in your first year are centered around clear role definition, planning and management, and product ownership. This lays the groundwork for internal advancement of Scrum and Agile.

Once the advanced level is complete, you will prepare for the final phase to CSP-PO™. Apply your mastery of A-CSPO™ topics with an ideal learning map to build iterative improvement and development within your team, the organization, and yourself.
